

Importing morphology files in to BullReporter II

1. Verify that the morphologist has sent you a compatible file.

(a) Morphology Results

The file should arrive as an attachment with the filename MResult followed by the job number, and ending with .xml

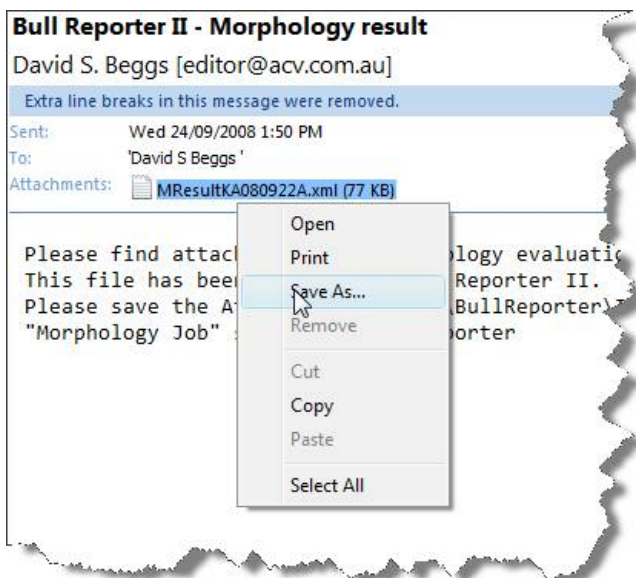

If your attachment does not look like this, it's not a BullReporter II file !

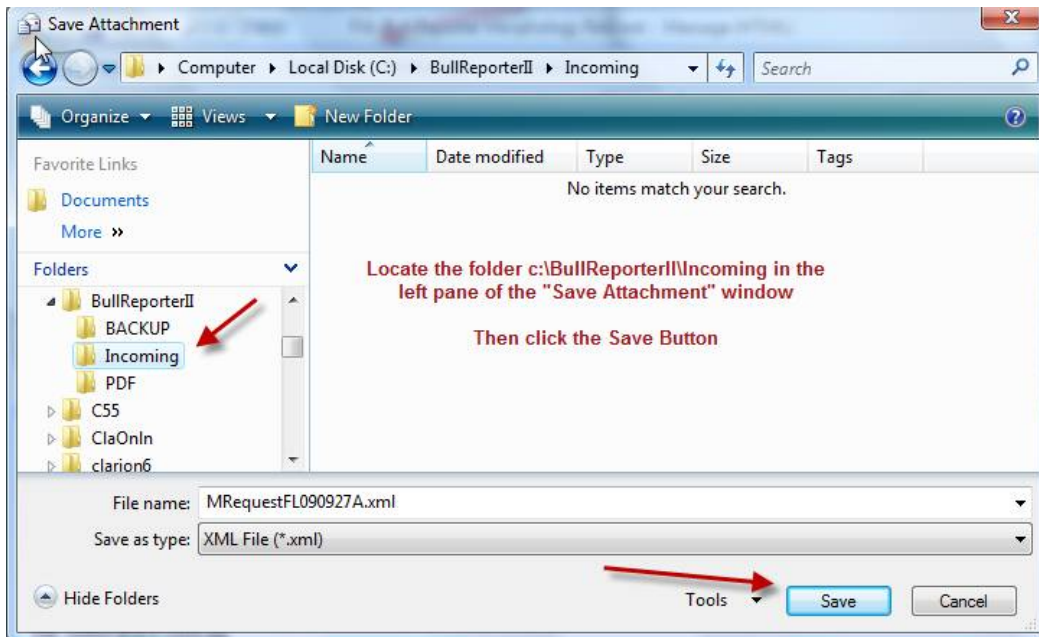

(b) Morphology Requests

The file will start with MRequest instead of MResult.

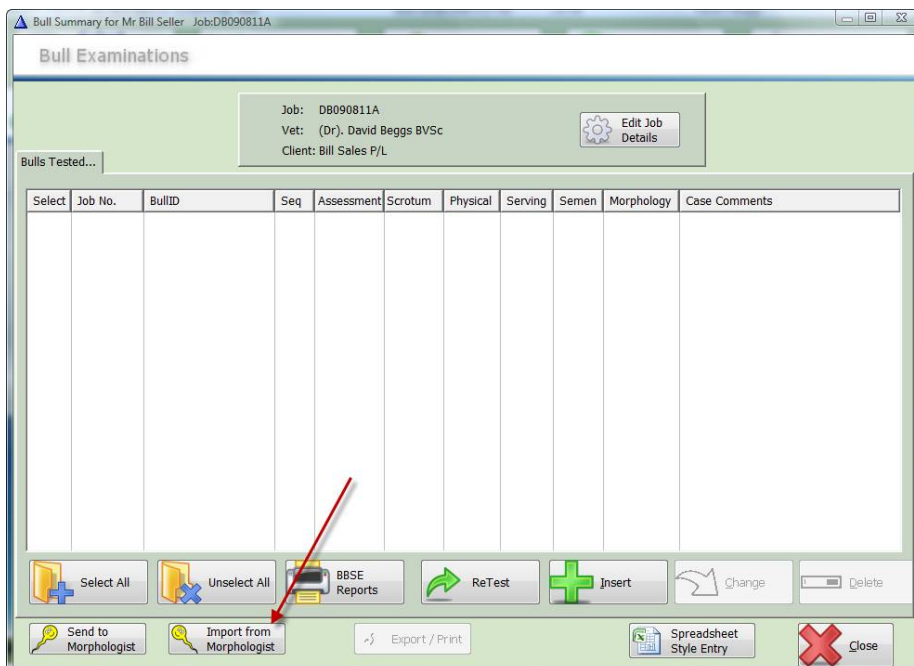

2. Right Click the attachment and click "Save As"

3. Locate the folder c:\BullReporterII\Incoming in the left pane, then click Save:

4. Open Bull Reporter II and log in.
5. To download Morphology Results, go to the Bull Assessment Screen (of any job) and click the "Import from Morphologist" Button:

To download a Morphology Request, go to the Morphology screen and click the "Import from Vet" button.

Tip:

Sending a job to a morphologist sends all the data about a job. If you wish to send a job from one computer in a practice to another (eg a laptop to the server), you can use the "Send to Morphologist" and "Import from Vet" buttons to do this.
